

"I can't say enough about the service personnel at Colorbiotics. They know the products and equipment inside and out, and they get the job done right the first time, every time. They're one of the many reasons we keep going back to Colorbiotics."

Bill (Jawz) Jaworski

AFTER THE SALE

What to expect from Colorbiotics

WE'RE GOING TO RAISE YOUR EXPECTATIONS ABOUT SERVICE.

At Colorbiotics, "after the sale" is just the beginning. We're committed to providing a level of service that'll raise your expectations about every company you deal with.

It starts with the confidence we have in our own products. We're the only registered colorant supplier whose production process adheres to ISO-9001 standards, so we know we're providing the equipment and colorants you can count on.

What's more, we back it up with an outstanding warranty and more than 25 years of landscape industry know-how. Colorbiotics customers have the peace of mind that comes with knowing support is never more than a phone call away.

We're committed to our customers. Because our service holds as fast as our colorants.

RELIABLE PRODUCTS, RELIABLE EQUIPMENT — WITH RELIABLE PEOPLE BEHIND THEM.

Our goal is to provide innovative products and imaginative solutions that complement your business and enhance your bottom line. Service is an integral part of that goal.

That's why our expert technical staff is always available to answer your questions and help you set up your system. It's why we offer a truly customer-focused warranty that covers new machine setups, machine inspections, color pump calibration, parts-order processing, one-call troubleshooting, and more.

Whether it's a year after the sale or even longer, we're going to help make sure our products are working for you.

OUR CUSTOMIZED PLANS TAKE SERVICE TO THE NEXT LEVEL

No two mulch operations are alike, so we'll use our experience and industry knowledge to customize a service plan that fits your needs precisely.

Our plans are based on preventive-maintenance schedules and then fine-tuned to the specific needs of your business. The goal is always to keep downtime to a minimum while keeping you running at peak production.
