

## Colorbiotics® brings beauty and safety together

Colorbiotics offers colorants for many of the landscape products consumers look for today, from sand, to rubber, to stone, to wood.

Color-enhanced sand, used for years to enhance the look of golf courses, is now available to bring backyard sandboxes to life. Rubber mulch that cushions falls on playgrounds is now available in a variety of colors that offer aesthetic choices such as a school's official colors. Colored stones or wood mulch enhance any landscape.

Imagine the ability to bring the color choices you make for your home's interior to its exterior as well. With color-enhanced mulch, you can do just that. Homeowners and businesses can enrich their outdoor environment by choosing colored mulch as a safe, natural, and beautiful landscaping tool. To see examples of the effect of colored mulch on various landscape applications or to utilize a free calculator to determine the amount of mulch needed to cover a specific area, see the Colorbiotics consumer website: [www.mulchcolors.com](http://www.mulchcolors.com).

Aesthetics aside, safety is always a consumer concern when it comes to products used in or around the home. Colorbiotics uses its twenty-five-plus years of landscape coating experience to insure that its products not only add beauty, but offer safety as well.

Colorbiotics C.O.O. Brent Lester says, "All our colorants have been independently tested and placed in the safest level of toxicity possible – Category IV. This is the same level as everyday sugar and is actually lower than the toxicity level in salt or baking soda."

Rest assured, Colorbiotics colorant on your mulch is not only safe for humans, but for soil, animals, and air as well. Colorbiotics suggests consumers look for the "Certified Mulch and Soil Seal of Approval" to be sure of independent lab testing for safety.

"We go beyond the required toxicology tests," says Lester. "We are differentiated from our competition in our extensive in-house safety testing. We don't just meet legal requirements. We set our sights toward meeting the consumer's demand for a greater level of comfort," he says. Colorbiotics takes calls directly from consumers at 888-663-6980 and offers a website to answer safety concerns and offer additional information.
